

## SolarTech Power Solutions

# All-vanadium redox flow battery purchase

## Overview

---

What is a vanadium redox flow battery?

A vanadium redox flow battery (VRFB), also known as a vanadium flow battery (VFB) or vanadium redox battery (VRB), uses vanadium ions as charge carriers. Due to their relative bulkiness, vanadium flow batteries are mainly used for grid energy storage.

Who manufactures vanadium redox batteries?

A company that is recognized globally for manufacturing vanadium redox batteries (VRBs) is VRB Energy. Majority-owned by Ivanhoe Electric, a subsidiary of I-Pulse, VRB Energy is credited with developing the world's longest-lasting VRB. Their products are reliable, recyclable, safe, and scalable.

What is a redox flow battery?

It is a safe and flexible energy storage solution that can be used for grid support, renewable integration, wholesale electricity market participation, and microgrids. Redox flow batteries are rechargeable batteries that are charged and discharged by means of the oxidation-reduction reaction of ions of vanadium.

What is vanadium redox flow technology?

Self-contained and incredibly easy to deploy, they use proven vanadium redox flow technology to store energy in an aqueous solution that never degrades, even under continuous maximum power and depth of discharge cycling. Our technology is non-flammable, and requires little maintenance and upkeep.

What is a vanadium flow battery system?

Vanadium flow battery systems are ideally suited to stabilize isolated microgrids, integrating solar and wind power in a safe, reliable, low-maintenance, and environmentally friendly manner. VRB Energy grid-scale

energy storage systems allow for flexible, long-duration energy storage with proven high performance.

What is a redox flow battery (VRFB)?

With the cost-effective, long-duration energy storage provided by Stryten's vanadium redox flow battery (VRFB), excess power generated from renewable energy sources can be stored until needed—providing constantly reliable electricity throughout the day and night. Without storage, renewable electricity must be used the moment it is generated.
