

SolarTech Power Solutions

Automatic on-site energy prices for solar

Overview

NREL's bottom-up cost modeling methodology, shown here for residential PV systems, considers a wide set of factors and many interactions between them. These bottom-up models capture the impacts of economies of scale, efficiency, location, system design, and company structure on total costs.

NREL's bottom-up cost modeling methodology, shown here for residential PV systems, considers a wide set of factors and many interactions between them. These bottom-up models capture the impacts of economies of scale, efficiency, location, system design, and company structure on total costs.

NREL analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NREL's PV cost benchmarking work uses a bottom-up.

Each year, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U.S. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs.

Take control of your energy costs with solar power. Solar panels generate “free” electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025. That price effectively drops to \$19,873.

Generate your own clean energy from the sun for free with solar. Add Powerwall to store your energy for use anytime you need it. Flexible financing and low monthly lease options can help you secure the best price for your solar system. By installing solar panels, you can also reduce your reliance.

Solar panels cost about \$30,000 on average—but often pay for themselves several times over through 25-30 years of electricity savings. Why trust EnergySage?

As subject matter experts, we provide only objective information. We design every article to provide you with deeply-researched, factual.

Consider solar panels if you have a high utility bill, get lots of sun and qualify for tax breaks or other savings. Some or all of the mortgage lenders featured on our site are advertising partners of NerdWallet, but this does not influence our evaluations, lender star ratings or the order in which.
