Battery life of communication base station

Overview

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO₄) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. Modular Design: A modular structure simplifies installation, maintenance, and scalability.

How long does a LiFePO₄ battery last?

This is crucial for telecom base stations that require continuous operation. Long Cycle Life LiFePO₄ batteries can achieve over 2,000 cycles, and in some cases up to 5,000 cycles, far surpassing the 300-500 cycles of lead-acid batteries. This translates to lower replacement frequency and maintenance costs.

How do you protect a telecom base station?

Backup power systems in telecom base stations often operate for extended periods, making thermal management critical. Key suggestions include: Cooling System: Install fans or heat sinks inside the battery pack to ensure efficient heat dissipation.
