

## SolarTech Power Solutions

# Canadian Telecom Base Station Energy Storage

## Overview

---

What is a telecom battery backup system?

A telecom battery backup system is a comprehensive portfolio of energy storage batteries used as backup power for base stations to ensure a reliable and stable power supply. As we are entering the 5G era and the energy consumption of 5G base stations has been substantially increasing, this system is playing a more significant role than ever before.

Should telecommunication operators invest in a telecom battery backup system?

Investing in a telecom battery backup system is always one of the priorities for telecommunication operators in the 5G era. Sunwoda 48V telecom batteries have a capacity covering 50Ah-150Ah, which can easily meet the power backup needs of macro and micro base stations.

What is compressed air energy storage (CAES)?

In Compressed Air Energy Storage (CAES), air is compressed and stored in underground structures like mines, aquifers, salt caverns or old oil reservoirs, or in aboveground pressure vessels. When electricity is needed, the air is released to power a turbine and generate electricity.

What are the different types of compressed air energy storage?

There are two types of CAES: conventional compressed air energy storage (C-CAES) and adiabatic compressed air energy storage (A-CAES). When air is compressed, heat is produced. In C-CAES, the heat generated during the compression phase is released into the atmosphere.
