

## SolarTech Power Solutions

# Central African Republic lithium battery pack

## Overview

---

Who makes EV batteries in South Africa?

South Africa also produces aluminum from imported bauxite. Semi-fabricator Hulamin supplies the US market with fabricated products for EV batteries (Hedley, 2023). A significant number of firms assembling battery packs from imported cells for the BESS market have been established, including capabilities in battery management systems and components.

Can Africa scale up its mining and processing of battery minerals?

The Africa Natural Resources Management and Investment Center (ANRC) of the African Development Bank (AfDB) estimates dramatic increases in global demand for various battery minerals by 2040, representing a very clear opportunity for African countries to scale up their mining and processing of battery minerals to meet this demand.

Does South Africa have manganese in NMC batteries?

Upstream, South Africa holds about 80% of the world's reserves of manganese, essential for NMC batteries. Ongoing battery research and development seeks to lower the cobalt content of NMC batteries by substituting with a higher share of manganese, a potential supply boost for the mineral.

Can African battery mineral value chains support the green transition?

This paper provides a brief analysis of the prospects for the development and integration of African battery mineral value chains (BMVCs) to support the green transition. African countries have outlined ambitions to industrialize (Chang et al., 2016), including by adding value to their mineral endowments in various documents and fora.

Which countries have banned unprocessed lithium in 2023?

Namibia and Ghana both announced prohibitions on unprocessed lithium and

other CMS in 2023. In addition to lithium, Namibia has deposits of copper, uranium and rare earths while Ghana counts bauxite and iron amongst its strategic minerals (EMIS, 2024). The world's eighth largest cobalt mines are situated in the DRC's Katanga mining region.

Do Chinese mining companies have a role in battery mining in Africa?

On the African continent, Chinese mining companies have had a growing, albeit uneven, presence in the extraction of battery and other CMs (Andreoni & Roberts, 2022). 2. African countries hold approximately 30% of the world's proven reserves of CMs, with particularly high shares of certain battery minerals.
