

## SolarTech Power Solutions

# Construction cost of household energy storage per kilowatt-hour

## Overview

---

Battery storage prices have gone down a lot since 2010. In 2025, they are about \$200–\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh.

Battery storage prices have gone down a lot since 2010. In 2025, they are about \$200–\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh.

This report is available at no cost from the National Renewable Energy Laboratory (NREL) at Cole, Wesley and Akash Karmakar. 2023. Cost Projections for Utility-Scale Battery Storage: 2023 Update. Golden, CO: National Renewable Energy Laboratory. NREL/TP-6A40-85332.

Battery storage prices have gone down a lot since 2010. In 2025, they are about \$200–\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy.

The cost of home battery storage has plummeted from over \$1,000 per kilowatt-hour (kWh) a decade ago to around \$200-400/kWh today, making residential energy storage increasingly accessible to homeowners. This dramatic price reduction, coupled with rising electricity rates and growing grid.

DOE's Energy Storage Grand Challenge supports detailed cost and performance analysis for a variety of energy storage technologies to accelerate their development and deployment. The U.S. Department of Energy's (DOE) Energy Storage Grand Challenge is a comprehensive program that seeks to accelerate.

Battery Energy Storage Systems (BESS) are becoming essential in the shift towards renewable energy, providing solutions for grid stability, energy management, and power quality. However, understanding the costs

associated with BESS is critical for anyone considering this technology, whether for a.

In 2023, the global average stood at \$150/kWh for lithium-ion systems, but regional variations tell a more complex story. China's massive production scale drives prices down to \$110/kWh, while remote areas like Alaska still face \$300/kWh installations. Three factors dictate energy storage costs per.
