

## SolarTech Power Solutions

# Construction scale of 100MW energy storage power station

## Overview

---

This project is one of the first new energy storage demonstration projects in Sichuan Province, with a total investment of approximately 1.36 billion yuan, covering an area of 58.64 acres and an overall construction scale of 100MW/400MWh. What is China's first large-scale chemical energy storage demonstration project?

The project is the first national large-scale chemical energy storage demonstration project approved by the National Energy Administration of China, with a total construction scale of 200MW/800MWh. The grid connection is the first phase project of the power station, with a scale of 100MW/400MWh.

What is the largest grid-forming energy storage station in China?

This marks the completion and operation of the largest grid-forming energy storage station in China. The photo shows the energy storage station supporting the Ningdong Composite Photovoltaic Base Project. This energy storage station is one of the first batch of projects supporting the 100 GW large-scale wind and photovoltaic bases nationwide.

What is Ningxia power's energy storage station?

On March 31, the second phase of the 100 MW/200 MWh energy storage station, a supporting project of the Ningxia Power's East Ningxia Composite Photovoltaic Base Project under CHN Energy, was successfully connected to the grid. This marks the completion and operation of the largest grid-forming energy storage station in China.

What is the 100 MW energy storage system?

The 100 MW system is an energy storage installation that will provide critical capacity to meet local reliability needs in the area, while helping California meet its environmental goals.

Who makes Dalian constant current energy storage power station?

The power station is constructed and operated by Dalian Constant Current Energy Storage Power Station Co., Ltd. and the battery system is designed and manufactured by Dalian Rongke Energy Storage Technology Development Co., Ltd.

How does the energy storage system work?

Each energy storage unit is connected to the 35kV distribution unit of the booster station through a 35kV collector line and then boosted to 220kV via a 120MVA (220/35kV) transformer. The project is equipped with an energy management system (EMS) to receive grid dispatching commands and manage the charge and discharge of the energy storage system.
