Cuba solar Energy Storage Power Generation Project

Overview

The Cuban government's plan is to install 55 solar parks similar to the one in Cotorro by 2025. The total capacity will be 1,200 MW. These are part of a broader project running until 2028, which aims to build 92 parks, with the goal of adding more than 2,000 MW to the National.

The Cuban government's plan is to install 55 solar parks similar to the one in Cotorro by 2025. The total capacity will be 1,200 MW. These are part of a broader project running until 2028, which aims to build 92 parks, with the goal of adding more than 2,000 MW to the National.

The plan aims for one thousand megawatts of solar energy by 2025, but without installed batteries, which prevents meeting nighttime demand and limits its effectiveness against persistent blackouts. The Cuban government announced that it plans to incorporate one thousand megawatts (MW) of solar.

The Cabaiguán photovoltaic park, with a capacity of 21.87 MW, located in the central province of Sancti Spíritus, began operations after just over two months of installation. This is part of Cuba's national plan that calls for the construction of 55 solar parks by 2025, each with a capacity of 21.8.

On Saturday, Cuba initiated the installation of solar energy storage batteries at four electrical substations, marking a significant step in addressing its energy challenges. These Battery Energy Storage Systems (BESS), also referred to as "concentrator units," are being placed at Cueto 220, Bayamo.

HAVANA TIMES – On February 21, 2025, the first solar photovoltaic park was inaugurated, with a capacity of 21.8 MW. The project, located in Cotorro—on the outskirts of Havana—is part of the island's government's bet on solar energy to address the country's dire electricity situation. According to.

The Cuban government has unveiled a bold initiative to introduce one thousand megawatts (MW) of solar energy into the National Electric System (SEN) by 2025. This effort, which involves establishing approximately fifty photovoltaic parks across the nation, aims to address Cuba's persistent

energy.

Cuba has announced the construction of 40 photovoltaic-powered electric vehicle charging stations, starting in Havana, where most of the country's nearly 50,000 electric vehicles are located. The project, led by state-owned Cimex, will roll out in four stages of 10 stations each. Each station will.
