by an agency of the U.S. Government. Neither the U.S. Government nor any agency thereof, nor any of their employees, makes any warranty, expressed or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness, of any information, apparatus, product, or.

In the United States, cumulative utility-scale battery storage capacity exceeded 26 gigawatts (GW) in 2024, according to our January 2025 Preliminary Monthly Electric Generator Inventory. Generators added 10.4 GW of new battery storage capacity in 2024, the second-largest generating capacity.

US developers of large-scale battery storage stations have 18.7 GW of new capacity under construction, according to S&P Global Commodity Insights Market Intelligence data, indicating another strong year for the grid's electrochemical shock absorbers. Capacity under construction has grown by a net.

The operating capacity of battery storage in the US grew by 7.9GW last year, bringing the country's total cumulative installed base to 17GW by the end of 2023. The figures have been released by the American Clean Power Association (ACP) trade group, which published its annual report on statistics.

Over 40 gigawatt (GW) was added in 2023, double the previous year's increase, split between utility-scale projects (65%) and behind-the-meter systems (35%). Battery storage has many uses in power systems: it provides short-term energy shifting, delivers ancillary services, alleviates grid.

Analyses on players, project pipelines, grid-scale & residential BESS markets, technology trends & benchmarking, battery storage safety & thermal management, applications, revenue streams, regional incentives & targets. Battery demand for stationary energy storage (ES) is set to grow as the volume.
