Demand for outdoor power in Ireland

Overview

The electricity sectors of the and are integrated and supply 2.5 million customers from a combination of , , , and . In 2022, 34 TWh were generated. In 2018 natural gas produced 51.8%, while wind turbines generated 28.1%, coal 7%, and peat 6.8% of Ireland's average electricity demand. In 2020 wind turbines generated 36.3% of Ireland's electrical demand, one of the highest wind power proportions in the world. W.

Ireland's energy landscape is changing fast, driven by ambitious climate goals, growing electricity demand, and the urgent need to move away from fossil fuels. In 2025, the country is seeing major strides in wind and solar power, while facing new pressures from sectors like data centres.

Ireland's energy landscape is changing fast, driven by ambitious climate goals, growing electricity demand, and the urgent need to move away from fossil fuels. In 2025, the country is seeing major strides in wind and solar power, while facing new pressures from sectors like data centres.

The electricity sectors of the Republic of Ireland and Northern Ireland are integrated and supply 2.5 million customers from a combination of coal, peat, natural gas, wind and hydropower. In 2022, 34 TWh were generated. [1] In 2018 natural gas produced 51.8%, while wind turbines generated 28.1%.

EirGrid, which is responsible for managing, planning and operating Ireland's high voltage electricity grid and market, has released the All-Island Resource Adequacy Assessment, which looks at the balance between electricity demand and supply in Ireland over 10 years. The assessment is an evolution.

Demand for power from data centres is pushing supply to the limit in Ireland. Photo: Getty Demand for electricity is forecast to soar by 45pc over the next 10 years, raising fresh concerns over how the country's power supply will keep up. Data-centre growth will drive most of the increase, but it.

Modern societies depend on reliable and secure supplies of electricity. Electricity generation accounts for a third of all primary energy use in Ireland. On the left hand side are the fuel inputs to electricity generation. On the right hand side are the amounts of electricity generated by each of.

The IEA has discontinued providing data in the Beyond 2020 format (IVT files and through WDS). Data is now available through the .Stat Data Explorer, which also allows users to export data in Excel and CSV formats. IEA. Licence: CC BY 4.0 Data centres and energy – from global headlines to local.
