

SolarTech Power Solutions

Distribution of energy storage power stations in Northwest Mauritius

Overview

Where are the thermal power stations located in Mauritius?

Most of CEB's thermal power stations are located in the vicinity of the Port Area in Port Louis on account of on-shore fuel handling facilities which are readily available for unloading of fuel. Mauritius has a good solar regime, with a potential average annual solar radiation value of some 6 kWh/m²/day.

Where can I find information on energy access in Mauritius?

Find relevant data on energy production, total primary energy supply, electricity consumption and CO₂ emissions for Mauritius on the IEA homepage. Find relevant information for Mauritius on energy access (access to electricity, access to clean cooking, renewable energy and energy efficiency) on the Tracking SDG7 homepage.

Who owns the Central Electricity Board in Mauritius?

The Central Electricity Board (CEB) is a parastatal body wholly owned by the Government of Mauritius and operating under the aegis of the Ministry of Energy and Public Utilities.

How much energy does Mauritius generate?

Mauritius has a nominal installed capacity of 876.76 MW, out of which 498.47 MW are from CEB generating units and the remaining 378.29 MW are from Independent Power Producers, Medium Scale Distributed Generators and Small Scale Distributed Generators. In 2018, the total energy generated amounted to 2,827.6 GWh.

Does Mauritius have a good solar system?

Mauritius has a good solar regime, with a potential average annual solar radiation value of some 6 kWh/m²/day. The wind regime is also very good in some areas, with an annual average speed of 8.1 m/s at 30 m above ground level. However, at present, the exploitation of solar and wind energy is still at

the inception stage in Mauritius.

Does Mauritius have solar and wind energy?

However, at present, the exploitation of solar and wind energy is still at the inception stage in Mauritius. Hydropower plants, with a combined installed capacity of 60 MW, contribute to some 4% of the total energy production. The share of bagasse in the energy mix accounts for around 11%.
