Djibouti Power Grid Energy Storage System

Overview

What is the source of Djibouti's energy?

Approximately 65 percent of Djibouti's electricity comes from external sources. The remaining energy comes from its own geothermal, solar, wind, and biomass sources. According to the International Renewable Energy Agency (IRENA), this reliance on imported energy can lead to price volatility that can hinder economic development plans.

How does the electricity supply in Djibouti work?

Electricité de Djibouti (EDD) determines the feasibility and specifications of a connection to the electricity supply, as well as the connection fees. Following the inspection, the quote is transferred internally from the secretariat to the service manager, and then to the customer service department.

Is AMEA power signing a long-term PPA with Djibouti?

The PPA being signed. Image: Amea Power. UAE-based renewable energy developer AMEA Power has signed a long-term PPA with the national utility of Djibouti for a 25MW solar PV plus battery storage unit. AMEA Power announced the signing of the power purchase agreement (PPA) with Electricité de Djibouti (EDD) today (29 August).

Will AMEA develop a battery storage project in the Grand Bara Desert?

AMEA will develop the project in the Grand Bara desert region under a build-own-operate and transfer (BOOT) model. It hasn't yet revealed the size in MW or MWh of the battery storage portion but said the project is expected to generate 55GWh of energy annually.
