

## SolarTech Power Solutions

# Energy storage container working mode

 **TAX FREE**    

**Product Model**  
HJ-ESS-215A(100KW/215KWh)  
HJ-ESS-115A(50KW 115KWh)

**Dimensions**  
1600\*1280\*2200mm  
1600\*1200\*2000mm

**Rated Battery Capacity**  
215KWH/115KWH

**Battery Cooling Method**  
Air Cooled/Liquid Cooled

  
ENERGY STORAGE SYSTEM

## Overview

---

How much energy does a container storage temperature control system use?

The average daily energy consumption of the conventional air conditioning is 20.8 % in battery charging and discharging mode and 58.4 % in standby mode. The proposed container energy storage temperature control system has an average daily energy consumption of 30.1 % in battery charging and discharging mode and 39.8 % in standby mode. Fig. 10.

How much power does a containerized energy storage system use?

In Shanghai, the ACCOP of conventional air conditioning is 3.7 and the average hourly power consumption in charge/discharge mode is 16.2 kW, while the ACCOP of the proposed containerized energy storage temperature control system is 4.1 and the average hourly power consumption in charge/discharge mode is 14.6 kW.

What is a container energy storage system?

Containerized energy storage systems play an important role in the transmission, distribution and utilization of energy such as thermal, wind and solar power [3, 4]. Lithium batteries are widely used in container energy storage systems because of their high energy density, long service life and large output power [5, 6].

What is the operation mode of energy storage battery?

When the energy storage battery operates in charging/discharging mode, the operation mode is VCRM for the proposed temperature control system when the outdoor temperature is greater than 20 °C. And the operation mode is switched to VPHPM when the outdoor temperature is greater than or equal to 20 °C.

What are energy storage systems?

TORAGE SYSTEMS 1.1 Introduction Energy Storage Systems (“ESS”) is a group

of systems put together that can store and release energy as and when required. It is essential in enabling the energy transition to a more sustainable energy mix by incorporating more renewable energy sources that are intermittent.

What is the COP of a container energy storage temperature control system?

It is found that the COP of the proposed temperature control system reaches 3.3. With the decrease of outdoor temperature, the COP of the proposed container energy storage temperature control system gradually increases, and the COP difference with conventional air conditioning gradually increases.
