Overview

Will New York achieve 6 gigawatts of energy storage by 2030?

Share sensitive information only on official, secure websites. Governor Kathy Hochul today announced that the New York State Public Service Commission approved a new framework for the State to achieve a nation-leading six gigawatts of energy storage by 2030, which represents at least 20 percent of the peak electricity load of New York State.

What is the first priority for selling energy?

The first priority for selling energy in this study is defined as the set of participants N S who have maximized their self-consumption (I P N e t n p, s u p p l y), meaning that they will sell energy with the lowest amount of surplus energy.

Are energy storage systems in demand?

Energy storage systems are increasingly in demand to increase the effectiveness of solar power arrays, with the Energy Information Administration estimating in February that new utility-scale electric-generating capacity on the U.S. power grid will hit a record in 2025 after a 30% increase over the prior year.

Should prevailing wage be paid for energy storage projects?

Payment of prevailing wage as a programmatic requirement for energy storage projects with a capacity of one megawatt and above, demonstrating the state's continued commitment to driving family-sustaining jobs in clean energy.

How do you hedge energy storage assets?

One way to do that is through commodity hedges or related derivatives. While energy storage hedges are not particularly common today, that may change as capital costs for battery storage assets decrease and other factors fall into

place.

Should energy storage be included in the electric grid?

Integrating storage in the electric grid, especially in areas with high energy demand, will allow clean energy to be available when and where it is most needed. As New York continues to invest and build a cleaner grid, energy storage will allow us to use existing resources more efficiently and phase out the dirtiest power plants.
