Energy storage projects in South America are accelerating construction

Overview

Chile: Hybrid PV-storage projects to dominate by 2026-2027, with green hydrogen as a new driver. Argentina: Summer blackouts in 2025 will catalyze household storage, with “solar-storage loans” gaining traction.

Chile: Hybrid PV-storage projects to dominate by 2026-2027, with green hydrogen as a new driver. Argentina: Summer blackouts in 2025 will catalyze household storage, with “solar-storage loans” gaining traction.

Atlas Renewable Energy recently inaugurated the 200 MW/800 MWh ‘BESS Del Desierto’ project in Chile’s Antofagasta region days after closing \$510 million to build the 215 MW solar plus 418 MW/1,672 MWh BESS Estepa site. pv magazine spoke with Alfredo Solar, Atlas’ regional manager for Chile, about.

Latin America is entering a transformative decade in its energy landscape, driven by the urgent need to expand power output, decarbonize, lower energy costs, improve grid resilience, and integrate massive volumes of renewable energy. Battery Energy Storage Systems (BESS) have emerged as the.

As Chile continues to integrate renewable assets onto its energy grid, investing in flexible assets like energy storage becomes increasingly important for grid stability. According to a 2021 report by Wärtsilä, “Front-Loading Net Zero,” achieving a 100 percent carbon neutral power system in Chile.

Revenue Models: Independent BESS now allowed in frequency regulation and price arbitrage markets, boosting shared storage by 400% in H1 2024. □

Argentina: Distributed Demand: New policy raises self-consumption cap to 12MW, triggering a surge in residential and industrial PV+storage. Price Shock:.

Sunny Power signed a 650MW PV project in Brazil in 2022, and also signed a 500MW distribution agreement with Brazil's SOL+Distribuidora last year. On January 12, BYD and Spain's Grenergy reached a procurement agreement for a 1.1GWh energy storage system for the world's largest energy storage.

The new energy storage installed capacity in South America presents the characteristics of "policy-driven, renewable consumption and Chinese enterprises-led", with Chile and Brazil as the core growth points, and lithium-ion battery energy storage as the dominant technical route. With its.
