Energy storage requirements for wind power projects in Tajikistan

Overview

What is wind energy potential in Tajikistan?

Wind Energy Potential: There is limited potential for wind energy in Tajikistan. Promising Wind Energy Potential Areas: Pamir Mountains, Turkestan Range, Vakhsh Range. Potential Hydrogen Costs: \$6-8 per kg of H₂ assuming electricity prices of \$0.1 per kWh.

Can Tajikistan's solar power be harnessed to meet energy-policy goals?

In addition to hydropower, Tajikistan's significant solar power potential could be harnessed to meet several energy-policy goals simultaneously, and the government has recently set a target for renewable energy to provide 10% of generating capacity by 2030.

Why should Tajikistan invest in hydropower?

In addition to its vast hydropower export potential, Tajikistan's hydrogen production potential and reserves of critical raw materials, such as manganese, lead, aluminum and zinc, should be leveraged to enable Tajikistan's energy transition and to generate novel export revenue streams.

How does Tajikistan improve its energy security?

Tajikistan seeks to strengthen its energy security by harnessing its vast hydropower potential and expanding coal production. Tajikistan's economy is among the least carbon-intensive in the region, with the carbon emissions intensity of GDP roughly 31% lower than global average.

How much energy does Tajikistan import in 2023?

In 2023, the oil and gas imports constitute the largest share of Tajikistan's imports value, which is 16.78% (approximately \$957,46 million). However, to enhance national energy security, Tajikistan aims to transform its role to an energy exporter, thanks to its still untapped hydropower potential coupled with solar and wind.

Will Tajikistan scale up its electricity capacity by 2030?

The Tajikistan Development Strategy by 2030 aims to scale up its electricity capacity from 5.1 GW in 2021 to 10 GW, to enable 10 TWh of annual electricity export.
