Estonia Energy Storage Cell Project

Overview

Estonia has laid the cornerstone for what will become the largest battery park in continental Europe, a major step toward synchronising the Baltic power grids with Europe by 2025; the project, led by Evecon, Corsica Sole and Mirova, aims to bolster energy security and support Estonia's transition to renewable energy. Where is Estonia's largest battery storage facility located?

The flagship battery storage project commenced operations on February 1, only days before cutting ties with the Russian power grid. Estonian state-owned energy company Eesti Energia has inaugurated the nation's largest battery energy storage facility at the Auvere industrial complex in Ida-Viru County.

How will a battery energy storage park work in Estonia?

The battery energy storage park and its substation will be connected to the electricity transmission network using a 330kV AC underground cable, marking a first in Estonia. Baltic Storage Platform confirmed that the BESS will seek to ensure the stability and resilience of the Estonian electricity grid.

Why is Estonia building the largest Battery Park in Europe?

Estonia is building the largest battery park in continental Europe, boosting energy security and supporting the transition to renewables.

Should Estonia invest in battery parks?

Estonia's investment in large-scale battery parks highlights its strategic push for both energy independence and a more sustainable power grid. However, battery parks do have environmental impacts.

Who owns the Battery Park in Estonia?

The battery park will be called the Baltic Storage Platform, in which Evecon will have a 20 percent stake and Corsica Sole will have 80 percent stake. Climate Minister Kristen Michal (Reform) said that the emergence of reserve

and storage capacities in Estonia is good news and it is particularly welcome that it is being done by private companies.

Why is energy storage important for Estonia?

Energy storage is also vital for meeting Estonia's goal of sourcing all its electricity from renewable sources by 2030. The country's climate minister, Yoko Alender, emphasised the role of storage systems in this transition, saying they would help ensure a "clean, reliable and affordable energy future" for Estonia.
