Guatemala Base Station Energy Management System Processing

Overview

What is Guatemala's energy source?

This page is part of Global Energy Monitor 's Latin America Energy Portal. In 2018, Guatemala derived 57.43% of its total energy supply from biofuels and waste, followed by oil (29.54%), coal (7.68%), hydro (3.22%), and other renewables such as wind and solar (2.12%).

How is electricity regulated in Guatemala?

Guatemala's electricity industry is regulated by the General Electricity Act (Ley General de Electricidad) and the CNEE (Comisión Nacional de Energía Eléctrica). The DGH (General Direction of Hydrocarbons) regulates the hydrocarbon sub-sector.

How much electricity does Guatemala have?

As of 2020, Guatemala had 4110 MW of installed electrical capacity, based primarily on hydro power (38.38%), fossil fuels (30.36%), and biomass (25.20%). Other renewable sources represented a much smaller percentage of capacity, including wind (2.61%), solar (2.25%) and geothermal energy (1.20%).

What is the most important pipeline in Guatemala?

Guatemala's most important pipeline is the 474 km Hydrocarbons Stationary Transport System, which brings oil from the Campo Xan and Rubelsanto fields to the Puerto Santo Tomás de Castilla export terminal.

What are energy management systems (EMS)?

Energy Management Systems (EMS) play an increasingly vital role in modern power systems, especially as energy storage solutions and distributed resources continue to expand.

What are energy management systems?

The primary goals are reducing energy bills (by peak shaving), providing backup power, and ensuring swift adjustments to changing load requirements. Energy Management Systems provide the backbone for modern energy storage solutions, uniting hardware and software components into a cohesive whole.
