

## SolarTech Power Solutions

# How many volts does each string of 24v lithium battery pack have

## Overview

---

A 24V lithium-ion battery nominally consists of 8 cells in series, each with a nominal voltage of approximately 3.2V (for LiFePO<sub>4</sub> chemistry), summing to about 25.6V nominal.

A 24V lithium-ion battery nominally consists of 8 cells in series, each with a nominal voltage of approximately 3.2V (for LiFePO<sub>4</sub> chemistry), summing to about 25.6V nominal.

It's referred to as a 24-volt battery because it exhibits a nominal voltage of 24. The nominal voltage of a battery is the magnitude of the voltage across its terminals when it supplies power to a circuit. So, a 24-volt battery may read 27V on full charge but drops to its nominal voltage of 24.

This is the complete voltage chart for LiFePO<sub>4</sub> batteries, from the individual cell to 12V, 24V, and 48V. Download the LiFePO<sub>4</sub> voltage chart here (right-click -> save image as). Manufacturers are required to ship the batteries at a 30% state of charge. This is to limit the stored energy during.

A fully charged 24V lithium-ion battery typically measures around 29.2 volts when using lithium iron phosphate (LiFePO<sub>4</sub>) chemistry, which is common for OEM applications including forklifts, golf carts, and electric vehicles. The nominal voltage is about 25.6V, but charging raises the voltage above.

Since we have LiFePO<sub>4</sub> batteries with different voltages (12V, 24V, 48V, 3.2V), we have prepared all 4 battery voltage charts and, in addition, LiFePO<sub>4</sub> or lipo discharge curves that illustrates visually the reduction in voltage at lower battery capacities. Let's start with a 12V lithium battery.

A 24V battery voltage chart reveals the relationship between voltage and the battery's state of charge, helping you determine how much energy remains. This chart shows the voltage range from fully charged to discharged states, allowing users to identify the current state of charge (SoC) of their.

For example, common lithium-ion batteries have a nominal voltage of 3.7V, but in applications, the cells are constructed into battery packs to meet higher

voltage requirements. Lithium-ion batteries are usually categorized into 12V, 24V, and 48V voltage ratings. of which: 12V lithium-ion batteries.
