Before we go any further, we highly recommend that you choose a pure sine wave inverter. This type of inverter delivers high-quality electricity, similar to your utility company. This way, none of your appliance.

How much wattage does an inverter need?

Check the nameplate on the appliance to determine the actual wattage required. \* Appliances and tools with induction motors (marked \* in tables) may require from 3 to 7 times the listed wattage when starting. The start-up load of the appliance or tool determines whether an inverter has the capability to power it.

How much power does a 12V inverter use?

For example: If you're running a 1500W inverter on your 12v battery with 1000 watts of total AC load. So your inverter will be consuming 83 amps (amps = watts/battery volts) from the battery for which you'll need a very thick cable. using a thin cable in this scenario can damage the inverter or you'll not be able to run your load.

How do I select an inverter that has enough power?

To select an inverter from DonRowe.com that has enough power for your application, add the watts for items you may want to run at the same time. Use the total wattage, plus 20%, as your minimum power requirement. Note: The wattage's given below are estimates. The actual wattage required for your appliances may differ from those listed.

What can a 600W inverter power?

A 600W inverter can power TV, led lights, computer, laptop, Ceiling Fan, Printer, Blender, Video Game Console, Curling Iron, Humidifier, Sewing Machine, & other appliances with up to 500 Watts of an input requirement.

How do I choose the right AC inverter?

Knowing your AC power needs is key for selecting the right inverter.

WattBuild's calculator lets you list the devices you want to power and then tells you the key stats you need to know, as well as showing which products on the market are compatible. Use the Add Device section to begin adding your devices.

How to calculate inverter size?

Using the Inverter Size Calculator is quick and easy. You'll need three inputs:  
Total Wattage (W): This is the total power consumption of all the appliances or devices you plan to run through the inverter. Safety Factor: A multiplier to ensure some buffer above your actual power requirement. Typically ranges from 1.1 to 1.5.
