Cornell graduate student Dana Russell plants strawberries at a commercial solar farm in Ravena, New York. It is one of the active agrivoltaic research projects – the idea of growing crops while harnessing the sun’s energy – around the state. This is Part 3 in a five-part multimedia feature.

In its simplest form, a solar energy system on a farm is going to produce energy based on a few factors, including the amount of adequate sunlight and the size of the system. When there are long periods of cloudy or inclement weather, the performance of the solar energy system will drop. During.
