Huawei Digital Power and TÜV Rheinland have jointly completed ESS safety tests on Huawei's smart string and grid forming ESS platform (LUNA2000-4472 and LUNA2000-215 series). As a result, Huawei Digital Power has become the first company to receive the world's highest-level certificate for ESS.

Huawei energy storage uses industry-leading security protection technology to respond to complex energy storage security challenges in scenarios and provide owners with more reliable solutions. On the road to safe design of industrial and commercial energy storage, continued exploration by the.

Huawei Digital Power has made noteworthy strides in energy storage technology with its Smart String & Grid Forming Energy Storage System (ESS). Recently, this groundbreaking system successfully passed an extreme ignition test, establishing new benchmarks for safety within the energy sector.

Abstract: With the battery pack-level thermal runaway control, Huawei's fire-free energy storage system (ESS) redefines safety. [Shenzhen, China, December 24, 2024] Huawei Digital Power and TÜV Rheinland jointly completed ESS safety tests on Huawei's Smart String & Grid Forming ESS

Platform.

Huawei's Smart String & Grid Forming ESS passed extreme ignition testing. The successful outcome of these tests highlights Huawei's advancing efforts in energy storage safety and resilience. The growing emphasis on energy storage systems (ESS) is crucial as global energy demands increase and the.
