Huawei Japan Hybrid Energy Storage Project

Overview

Sun Village and Huawei signed a memorandum of understanding (MoU) on May 14, 2025. Under the MoU, Sun Village will target procuring 500MWh of battery storage systems from the Chinese manufacturer.

Sun Village and Huawei signed a memorandum of understanding (MoU) on May 14, 2025. Under the MoU, Sun Village will target procuring 500MWh of battery storage systems from the Chinese manufacturer.

[Tokyo, Japan, February 19, 2025] – Huawei Digital Power participated in the Japan International Smart Energy Week, which was held at Tokyo Big Sight from February 19th to 21st, 2025. Huawei Digital Power showcased cutting-edge energy solutions at two prominent venues: the Japan International.

Sun Village and Huawei signed a memorandum of understanding (MoU) on May 14, 2025. Under the MoU, Sun Village will target procuring 500MWh of battery storage systems from the Chinese manufacturer. Huawei will provide Sun Village with “good delivery lead times, after-sales services, and related.

Huawei’s Japanese energy storage battery is a pioneering technological endeavor that seeks to redefine energy management and sustainability.² The battery showcases state-of-the-art innovations in energy density and efficiency.³ It operates effectively in diverse environmental conditions.

Japan’s post-Fukushima energy landscape is like a high-stakes game of Jenga. With fossil fuel imports costing a fortune and nuclear power still controversial, the country’s betting big on hybrid energy storage systems to balance renewables like solar and wind. Think of it as a “belt-and-suspenders”.

Batteries that store energy from renewable sources are considered key to the world’s decarbonization efforts. TOKYO -- Huawei Technologies will begin selling large-scale battery systems for renewable energy storage in Japan in March, Nikkei has learned, seeking to tap growing demand as the nation.

The ramp up of battery storage projects in Japan continues apace, aided by growing subsidy avenues and rising volumes on various electricity markets,

from spot to balancing to capacity. As of May 2023, about 1.1 GW of supply has been contracted for grid-scale storage batteries nationwide, with.
