Industrial Energy Storage Cabinet Fire Protection System

Overview

The multi-level fire protection solution—comprising PACK-level detection and suppression, Cluster-level intelligent monitoring, and Cabinet-level comprehensive coverage—represents a systematic approach to mitigating fire risks in energy storage systems. Which energy storage projects are NFPA compliant?

In 2018, the first energy storage project to apply active combustible gas detection to NFPA standards In 2018, the first energy storage project to apply self-developed suppression tube fire extinguishing products to NFPA standards.

What is the FDA241 fire protection system?

The FDA241 is the ideal solution for early detection of electrical fires. In addition to controlling the automated extinguishing system, the fire protection system triggers all other necessary battery management system control functions.

Which energy storage projects have won NFPA certifications in 2021?

In 2021, won the Best Fire Safety Solution Award in China's Energy Storage Industry In 2022, the first energy storage project to mass apply explosion-proof plate design to NFPA standards In 2023, Gaogong Energy Storage - New Product Innovation Award In 2024, Changzhou Smart Manufacturing Factory was officially completed and launched (IATF16949).

Are self-developed fire extinguishing systems NFPA compliant?

In 2018, the first energy storage project to apply self-developed suppression tube fire extinguishing products to NFPA standards In 2019, the first energy storage project to apply self-developed active air intake and exhaust systems to NFPA standards.

Can a lithium-ion battery energy storage system detect a fire?

Since December 2019, Siemens has been offering a VdS-certified fire detection concept for stationary lithium-ion battery energy storage systems.* Through Siemens research with multiple lithium-ion battery manufacturers, the FDA unit has proven to detect a pending battery fire event up to 5 times faster than competitive detection technologies.

How does a fire protection system work?

In addition to controlling the automated extinguishing system, the fire protection system triggers all other necessary battery management system control functions. As its name implies - "aspirated" smoke and off-gas detection systems use an "aspirator" mounted in a detector unit.
