- Global Leading Inverter Brand
- World Single Phase PV Inverter Supplier

Overview

How much does a solar inverter cost?

You won't be able to use the electricity generated by your solar panels without a solar inverter. A solar inverter costs \$2,000 on average, with prices ranging from \$800 to \$5,000 —though the overall price is wrapped up in your solar panel installation. The size of your system, the type of inverter, and the efficiency rating affect your final cost.

How much does a string inverter cost?

String inverters cost \$800 to \$2,500 on average. Most homes only require a single inverter, but you could need up to three if you have a larger-than-average residential solar energy system. String inverters work by connecting several solar panels, which send their electricity to a central point where the inverter converts the power.

What is a solar inverter?

A solar inverter is a piece of electrical equipment that converts (or “inverts”) newly generated direct current (DC) electricity into alternating current (AC) electricity. Inverters are almost always necessary to use electricity generated by solar panels, whether you're assembling a small DIY system or a large community solar array.

Which solar power inverter is best?

1. Efficiency: 98.4% 2. Price: ~\$2,000 3. Best For: Small homes 3. Enphase IQ 7A Microinverter 1. Efficiency: 97% 2. Price: ~\$150 per unit 3. Best For: Panel-level optimization For more details, check out SolarClue Blog to compare the best solar inverters for 2025. How to Choose the Right Solar Power Inverter?

When selecting an inverter, consider:.

How to choose a solar inverter?

When selecting an inverter, consider: 1. Power Output: Match your solar panel wattage. 2. Battery Compatibility: If planning for a hybrid solar power system. 3. Warranty & Reliability: Ensure at least 10-15 years of warranty. 4. Brand Reputation: Investing in a trusted brand can guarantee better performance and durability.

How much does a microinverter cost?

Microinverters cost an average of \$150 to \$300 each, but you'll need one for each solar panel in your system. They're installed on the underside of each panel and immediately convert electricity as soon as it's generated, helping increase efficiency by limiting energy loss. Microinverters are popular because they perform well in areas with shade.
