Due to increases in demand for electric vehicles (EVs), renewable energies, and a wide range of consumer goods, the demand for energy storage batteries has increased considerably from 2000 through 2024. Energy storage batteries are manufactured devices that accept, store, and discharge electrical.

As the White House recognized in 2021, energy storage “offer[s] an important and growing market that can support the creation of American jobs, help meet our national security needs, and bring ambitious climate targets within reach.” In order to realize this potential, the United States must.

This report summarizes the needs, challenges, and opportunities associated with carbon-free energy and energy storage for manufacturing and industrial decarbonization. Energy needs and challenges for different manufacturing and industrial sectors (e.g., cement/steel production, chemicals, materials).

NREL's advanced manufacturing researchers provide state-of-the-art energy storage analysis exploring circular economy, flexible loads, and end of life for batteries, photovoltaics, and other forms of energy storage to help the energy industry advance commercial access to renewable energy on demand. How can pre-production storage system design improve manufacturing scale-up?

Identifying and implementing design innovations will align pre-production storage system design to set the stage for manufacturing scale up and improved production of cost-effective, safe, and reliable short-, medium-, and long-duration storage technologies. New Report Showcases Innovation to Advance Long Duration Energy Storage (LDES):.

What does OE's new RD&D report mean for energy storage?

New Report Showcases Innovation to Advance Long Duration Energy Storage (LDES): OE today released its new report "Achieving the Promise of Low Cost LDES." This report is one example of OE's pioneering RD&D work to advance the next generation of energy storage technologies.

How can energy storage technology improve resiliency?

This FOA supports large-scale demonstration and deployment of storage technologies that will provide resiliency to critical facilities and infrastructure. Projects will show the ability of energy storage technologies to provide dependable supply of energy as back up generation during a grid outage or other emergency event.

What does OE's new NOI mean for energy storage technology developers?

OE has announced an NOI for \$8 million in funding for up to four projects to address manufacturability challenges that energy storage technology developers face when making design decisions that impact production of the technology, including scaling.
