First off, yes, lithium battery cells can absolutely be connected in series. Connecting battery cells in series means you're linking the positive terminal of one cell to the negative terminal of another. When you do this, the voltages of the individual cells add up, while the capacity (measured in

Many people believe that you can charge lithium batteries in series, but is this really the case?

Once all connections are made, begin charging process according to your charger's instructions. If you have ever used a laptop, cell phone, or any other handheld device that uses a Lithium Ion battery.

When you connect battery packs in series, you're essentially lining them up so that the positive terminal of one battery pack is connected to the negative terminal of the next one. This setup increases the overall voltage of the battery system while keeping the capacity (measured in amp - hours).

A frequent question LiTime customers ask is: "What's the best way to charge two 12V LiFePO4 batteries connected in series to create a 24V system?"
