SolarTech Power Solutions

Kyrgyzstan courtyard solar energy

Overview

Due for completion by 2027, this project is set to become Central Asia’s largest solar initiative, meeting 20% of the country’s annual electricity demand and reducing carbon dioxide emissions by around 18 million tonnes.Why is China building a 100 MW solar power plant in Kyrgyzstan?

Kemin, Kyrgyzstan — In a significant step toward enhancing Kyrgyzstan’s energy infrastructure, China has begun construction of a 100 MW solar power plant in the city of Kemin, located in the Chuy Region. The project underscores Kyrgyzstan’s commitment to sustainable energy development and environmental preservation.

What is Kyrgyzstan's solar project?

The project underscores Kyrgyzstan’s commitment to sustainable energy development and environmental preservation. The solar plant, once operational, is expected to generate 155 million kWh of electricity annually, contributing to the country’s energy needs while reducing reliance on fossil fuels.

Does Kyrgyzstan have solar energy?

Kyrgyzstan’s geographic location and climatic conditions are quite favourable for the broader development of solar energy, evident in solar radiation maps.

Where does power come from in Kyrgyzstan?

In Kyrgyzstan’s predominantly mountainous terrain, winds of constant direction and strength sufficient for power generation can only be found in remote and sparsely populated areas.

Why does Kyrgyzstan use a lot of electricity?

After Kyrgyzstan gained its independence, residential power consumption rose significantly due to intensive use of electricity for heating and cooking.

How much money did the Kyrgyz project cost?

The project was funded by the state, and the budget reportedly did not exceed KGS 2.5 million (about USD 36.6 thousand at the exchange rate of the National Bank of the Kyrgyz Republic as of 18 April 2017: USD 1 = KGS 68 2881).
