

SolarTech Power Solutions

Large-scale centralized energy storage power station factory

Overview

What is Ningxia power's energy storage station?

The energy storage station is a supporting facility for Ningxia Power's 2MW integrated photovoltaic base, one of China's first large-scale wind-photovoltaic power base projects. It has a planned total capacity of 200MW/400MW, and the completed phase of the project has a capacity of 100MW/200MW.

How much electricity does Guangxi Power Station produce?

Funded and built by the Guangxi branch of China Southern Power Grid, the electricity storage station is able to initially produce 10 megawatt-hours (MWh). Once completed, it will reach 100 MWh, generating 73 million kWh of clean electricity annually.

How did Kehua achieve a high-performance energy storage system?

As the first pioneering project to combine semi-solid state batteries with energy storage system, Kehua adopted four 1.25MW high-performance energy storage converters, which were connected in parallel to a single 5,000kVA transformer, achieving a 35kV AC grid-connected output, which ensured the high efficiency and stability of power transmission.

What is a Fulin battery energy storage station?

The station will help improve peak energy management and foster widespread adoption of clean energy, marking a significant advancement in China's use of clean and renewable energy. The Fulin sodium-ion battery energy storage station was launched in Nanning, South China's Guangxi Zhuang Autonomous Region.

Why should you choose a lithium phosphate energy storage station?

The energy storage station adopts safe, reliable lithium iron phosphate battery cells for energy storage with great consistency, high conversion rate and long cycle life, as well as a non-walk-in liquid-cooled containerized energy storage

system.
