# Latest prices of solar panel main materials

## Overview

---

Solar module prices are on the rise, a trend that won't stop any time soon. And that's not all; the solar energy sector is buzzing with challenges as raw material costs for photovoltaic (PV) modules continue to climb. From silicon shortages to rising metal prices, the industry is feeling the heat.

Solar module prices are on the rise, a trend that won't stop any time soon. And that's not all; the solar energy sector is buzzing with challenges as raw material costs for photovoltaic (PV) modules continue to climb. From silicon shortages to rising metal prices, the industry is feeling the heat.

Discussions around what is driving the rise of prices of raw materials used in PV manufacturing are heated right now. And it all points to a few main culprits, namely, solar silicon, but also others such as supply chain issues, etc. Let's break them down: 1. Silicon: The Backbone of Solar Panels.

From upstream polysilicon, wafers and cells, to downstream panel prices, OPIS Global Solar Markets keeps you updated on solar price trends and forward prices. It is the first solar materials price report to use an assessment methodology that follows IOSCO requirements for fair and transparent.

Solar panels generate "free" electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

Solar panels cost \$1,200 per panel, depending on the type of panel, home size, energy usage, and labor. Clicking "Get Your Estimate" submits your data to All Star Pros, which will process your data in accordance with the All Star Pros Privacy Policy. Compare Companies Average Cost Key Factors Cost.

It begins with the raw materials. Just like how the cost of wheat impacts bread prices, the cost of silicon, aluminum, and other essential materials directly shapes solar panel pricing. In this guide, we'll break down seven major raw material cost trends that are influencing what you'll pay in 2025.

How much do solar panels cost on average?

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends.
