Libya Telecommunication Base Station Hybrid Energy Expansion Project

Overview

Are base transceiver stations environmentally friendly?

The only electrical source currently in service in the Base Transceiver Stations (BTS) is a diesel generator. As a result, diesel generators are not economical and are not environmentally friendly. Therefore, these sites must integrate sustainable energy sources like wind and solar [4].

What is a base transceiver station?

The base transceiver station is one of the main components of cell sites that consume energy. Diesel fuel purchases for generators, which make up over 80 % of plant-level energy expenditures at off-grid and off-grid tower sites, are the primary source of these costs.

Why do we need a hybrid energy system?

Promoting equality and employment creation can also improve the region's social and environmental characteristics. A hybrid energy system will assure energy security and reliability, especially when it has a variety of various heterogeneous energy supplies.

Are hybrid BTS sites good for Pakistan's telecom industry?

Hybrid BTS sites are, therefore, more economical and environmentally friendly regarding worries about global warming and long-term system functioning with no pollution. In conclusion, building improved BTS sites has positive technical, environmental, and financial effects on Pakistan's telecom industry.
