

SolarTech Power Solutions

Lithuania computer room communication BESS power station

Overview

What is the Vilnius Bess?

The Vilnius BESS will incorporate a NordNest smart energy management system, equipped with key control and communication functions to optimize performance. This technology aims to support the stability of the national grid by storing excess energy generated from solar and wind power plants, then releasing it when demand rises.

Do mobile Bess applications have communication interfaces?

This thesis project, carried out at Northvolt Systems, aims to analyze the existing and readily used communication interfaces for a specific set of mobile BESS applications. The analysis is performed by a literature review of typical mobile BESS applications with the identified corresponding communication interfaces.

Are mobile Bess applications compatible with smart grid applications?

The analysis is performed by a literature review of typical mobile BESS applications with the identified corresponding communication interfaces. Among the identified interfaces is the IEC 61850 standard, which shows suitability in smart grid applications, enabling interoperability, vendor-independence, and standardization.

Do coordinated voltage control strategies reduce voltage violations in Mobile Bess units?

As presented in , coordinated voltage control strategies for mobile BESS units shows mitigation of voltage violations by coordinated regulatory actions with transformer tap changers, capacitor banks and photo-voltaic generation in a distribution network.
