

SolarTech Power Solutions

New Energy Battery Cabinet Technical Analysis

Nominal Capacity

280Ah

Nominal Energy

50kW/100kWh

IP Grade

IP54

Overview

Can FEMP assess battery energy storage system performance?

This report describes development of an effort to assess Battery Energy Storage System (BESS) performance that the U.S. Department of Energy (DOE) Federal Energy Management Program (FEMP) and others can employ to evaluate performance of deployed BESS or solar photovoltaic (PV) +BESS systems.

Do utility-scale lithium-ion battery systems have cost and performance projections?

In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The projections are developed from an analysis of recent publications that include utility-scale storage costs.

Can a battery storage system increase power system flexibility?

sive jurisdiction.—2. Utility-scale BESS system description— Figure 2. Main circuit of a BESS Battery storage systems are emerging as one of the potential solutions to increase power system flexibility in the presence of variable energy resources, suc.

Are battery storage costs based on long-term planning models?

Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities. This work documents the development of these projections, which are based on recent publications of storage costs.

Can lithium-ion batteries be used in capacity expansion models?

The projections in this work focus on utility-scale lithium-ion battery systems for use in capacity expansion models. NREL utilizes the Regional Energy Deployment System (ReEDS) (Ho et al. 2021) for capacity expansion

modeling, and the battery cost projections developed here are designed to be used in those models.

What are the KPIs of a battery system?

For battery systems, Efficiency and Demonstrated Capacity are the KPIs that can be determined from the meter data. Efficiency is the sum of energy discharged from the battery divided by sum of energy charged into the battery (i.e., kWh in/kWh out).
