

SolarTech Power Solutions

New all-in-one inverter with high power

Overview

What is a hybrid inverter?

Hybrid inverters are essentially two inverters in one; they combine a solar inverter and a battery inverter into one simple unit. These advanced inverters use solar energy to power your home, charge a battery or send excess energy into the electricity grid. Most hybrid inverters can also provide emergency backup power during a blackout.

What is an all-in-one hybrid inverter?

An all-in-one hybrid inverter design streamlines solar energy systems by combining multiple components into a single unit, enhancing efficiency, simplifying installation, reducing overall costs, and providing seamless energy management and backup power capabilities in one integrated solution.

What is a solar inverter?

The solar inverter. It's the behind-the-scenes wizard that turns your panels' raw sunlight juice (DC power) into something your home can actually use (AC power). Pick a dud, and your solar dreams fizzle. Pick a champ, and you're golden.

Which hybrid inverter is best for your home?

Hybrid inverters like Fronius GEN24, Growatt MIN, and OutBack SkyBox future-proof your home for battery storage or off-grid setups. Choose based on roof type, shading, future storage plans, and budget.

How do I choose a hybrid inverter?

When evaluating a hybrid inverter, it's important to inquire about these capabilities and how they can be customized to suit your needs and preferences. Jason Svarc is an accredited solar and battery specialist who has been designing and installing solar and battery systems for over a decade.

Are hybrid inverters better than off-grid?

Due to the higher battery voltages ranging from 150 to 500V, they can also deliver the same power using much smaller gauge cables, making HV systems cheaper and easier to install. Like off-grid inverters, hybrid inverters must be used with the correct battery; they are not compatible with both low-voltage (48V) and high-voltage (HV) batteries.
