Overview

Does Africa need an enabling policy environment for 5G?

An enabling policy environment is essential for the success of 5G in Africa. Accordingly, governments and regulators need to foster a pro-investment and pro-innovation environment to support cost-effective network rollout and the development of innovative use cases to stimulate demand.

Who needs a private 5G network in South Africa?

In South Africa, for example, MTN is building private 5G networks for 14 companies in the mining and ports sectors. Most stakeholders in the 5G Africa Survey envisage demand for private 5G networks in their market, with mining, ports, oil and gas, education and agriculture among the prospective sectors.

How will 5G work in Africa?

In Africa, 5G will mostly be initially deployed using existing sites, meaning that operators may need to densify their networks to provide ample capacity in traffic hotspots in the future.

What role do national authorities play in Africa's 5G era?

As Africa moves into the 5G era, there is an important role for national authorities to communicate accurate and reliable information. Authorities in many countries, including Australia, France, Germany and the UK, have taken steps to both educate the public as well as caution the spread of 5G misinformation.

Is Africa ready for 5G?

The opportunities are tremendous, but so are the challenges. Although Africa as a whole is embarking on its 5G journey at a slower pace than more advanced markets, the region is well placed to benefit from an increasingly mature global 5G ecosystem, evidenced by increasing competition in the equipment supply and applications markets.

Should governments embrace 5G?

With the advent of 5G, there is a case for governments to make deliberate efforts to integrate the technology within the various tiers of governments and across public institutions as part of their overall digital transformation and national ICT strategies.
