One hundred megawatt solar panels

Overview

The number of solar panels required = $(100,000,000 \text{ watts} / 20\%) / (10,000 \text{ square meters} / \text{actual installation area})$ Assuming the actual installation area is 10,000 square meters, then the number of solar panels required is: Number of solar panels required = $5,000,000 / 10,000 = 5,000$ pieces Therefore , in this example, we would need about 5,000 solar panels to generate 100 megawatts of electricity.
