

SolarTech Power Solutions

Outdoor solar integrated machine on the wall

Overview

Can solar panels be mounted on walls?

There are purpose-built solutions on the market for mounting solar panels on walls. These are costly, and you need to buy them for each panel. The added cost is an important consideration. However, the advantage of these systems is that you can angle your panels more easily, as this functionality is built-in.

Are wall-mounted solar panels a good option in winter?

The winter sun is relatively low in the UK, and energy usage typically increases during winter. Therefore, wall-mounted panels can be particularly beneficial here. Without projecting a panel beyond 200mm from the wall, from the wall, you can mount a typical panel with dimensions 170cm by 110cm at around 80°.

How far from the wall can a solar panel be mounted?

Without projecting a panel beyond 200mm from the wall, from the wall, you can mount a typical panel with dimensions 170cm by 110cm at around 80°. A wall-mounted panel gives much better consistency and peaks in spring and autumn compared to the summer. Yearly production ~290kWh. There are multiple options for mounting panels on a wall.

Are wall-mounted solar panels a viable alternative to a roof?

Wall-mounted solar panels offer a viable alternative for UK properties with unsuitable roofs. While specific considerations regarding installation, regulations, and efficiency exist, they present an innovative way to harness solar energy, especially during winter.

Can solar panels be installed on a roof?

Home solar energy system owners have traditionally focused on installing panels on rooftops. However, wall mounting offers an alternative for properties with unsuitable roofs due to structural issues or shading. This guide

explores regulations, considerations, and the practicalities of wall-mounted solar panels.

What is Solar Siding?

Solar Siding refers to a prefabricated, all-in-one system that integrates all the layers of the wall with a power generating exterior material. The perforated metal skin of this system helps ventilate the wall cavity, cooling down and increasing the efficiency of the system. Solar Siding is designed to help cool down the building and generate power at the same time.
