

SolarTech Power Solutions

Poland mobile energy storage power supply price

◆ **PRODUCT INFORMATION** ◆

Energy Storage System

DW-ESS-100P-200

-  **BATTERY CAPACITY**
50kWh~500kWh
-  **DC VOLTAGE RANGE**
400V~1000V
-  **DEGREE OF PROTECTION**
IP54
-  **OPERATING TEMPERATURE RANGE**
-10~50°C

Overview

The much anticipated capacity market auction for 2029 conducted by Polskie Sieci Elektroenergetyczne (PSE) ended in the seventh round with a price of PLN 264.90/kW/year (\$65/kW/year).

The much anticipated capacity market auction for 2029 conducted by Polskie Sieci Elektroenergetyczne (PSE) ended in the seventh round with a price of PLN 264.90/kW/year (\$65/kW/year).

Let's face it - Poland's energy storage prices aren't just numbers on a bill anymore. They're a hot topic for businesses sweating over rising electricity costs and policymakers scrambling to balance green goals with economic realities. With average industrial electricity prices hitting €205/MWh in.

The much anticipated capacity market auction for 2029 conducted by Polskie Sieci Elektroenergetyczne (PSE) ended in the seventh round with a price of PLN 264.90/kW/year (\$65/kW/year). Such a clearing price rendered gas projects uneconomical and left significant room for battery storage systems to.

You know, when Poland's latest capacity auction closed at 264.9 zł/kW/year (\$65.3/kW) for 2.5GW of battery storage [1], it didn't just shock local developers. Well, this pricing benchmark is now making German and Spanish competitors sweat through their lederhosen and flamenco shirts. But why should.

Last year's main auction of the power market, with capacity delivery for 2029, further bumped up the capacity of storage projects. The Polish Economic Institute reported that in the power market's main auction, which was held in December 2024, storage capacity of around 2.5 GW was contracted.

WARSAW, March 24, 2025 - Poland's largest utility, PGE, has announced plans to invest \$4.7 billion in battery storage projects to support the country's transition to renewable energy. The initiative will enhance grid stability as intermittent renewable capacity replaces coal-fired power generation.

The landscape of utility-scale battery storage costs in Europe continues to evolve rapidly, driven by technological advancements and increasing demand for renewable energy integration. As we've explored, the current costs range from €250 to €400 per kWh, with a clear downward trajectory expected in. Is Poland moving towards battery energy storage systems (BESS)?

As expected, Poland's latest capacity market auctions have highlighted a significant shift towards the battery energy storage systems (BESS) beside the fact that the de-rating factor has been significantly decreased.

Are energy storage systems a new technology in Poland?

Energy storage systems are a relatively new technology in the Polish capacity market. They have participated in two auctions so far: making their official debut in 2022 (with 2027 delivery year) and subsequently dominating the competition in the 2023 auction.

Is energy storage a good investment in Poland?

In Poland, interest in energy storage investment has been evident for some time. Last year's main auction of the power market, with capacity delivery for 2029, further bumped up the capacity of storage projects.

What happened to energy storage in Poland?

The Energy Regulatory Office said in a report last year on electricity storage in Poland that, as a result of the main power market auctions for 2021-2028 and the supplementary auctions for 2012-2025, contracts for energy storage with a total capacity of 9.5 GW were concluded.

How much storage capacity does Poland have in 2024?

The Polish Economic Institute reported that in the power market's main auction, which was held in December 2024, storage capacity of around 2.5 GW was contracted, indicating that this was a 44 percent increase over 2023, in which the total contracted for batteries was 1.7 GW.

How big is Poland's energy capacity?

According to data from the Energy Market Agency, at the end of November 2024, Poland's installed capacity was about 20.7 GW, growing year-on-year by almost 28 percent, and the installed capacity of wind power plants was about 10.2 GW, increasing year-on-year by about 8 percent.
