Poland's energy storage sector is buzzing like a beehive in spring—full of activity, new projects, and a few stinging challenges. With solar prices dropping faster than a smartphone battery in winter (from \$0.238/W in Jan 2023 to \$0.13/W by December) [1], the country is racing to pair renewables.

Poland's record solar output this spring led to a spike in negative prices and curtailed PV volumes. Negative electricity prices reached a record high in April, with 75 hours seeing prices at or below zero. Pexapark's analysis reveals that around 27% of solar output was exposed to negative pricing.

With electricity prices increasing by 12% year-over-year and growing concerns about grid stability—especially due to extreme weather—more Polish households are adopting solar power combined with battery storage. These systems not only reduce monthly expenses but also provide greater energy.

Poland has just rolled out one of Europe's most ambitious energy storage programmes - a €980 million initiative that's set to transform the country's grid infrastructure. The Polish Ministry of Climate and Environment has finalised this landmark subsidy scheme, targeting over 5 GWh of new storage.

The Polish Economic Institute reported that in the power market's main auction, which was held in December 2024, storage capacity of around 2.5 GW was contracted, indicating that this was a 44 percent increase over 2023, in which the total contracted for batteries was 1.7 GW. The shift in the.
