

SolarTech Power Solutions

Power company s high-quality service for 5g base stations

 **TAX FREE**    

ENERGY STORAGE SYSTEM

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW 115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

Overview

What is a 5G base station?

As part of a network's wireless telephone system, a 5G base station is a fixed communication point that connects using a single or several antennas. It comprises a wireless receiver and a short-range transceiver with an antenna and analog-to-digital converters (ADCs) to convert radio frequency impulses to digital signals.

How much power does a 5G base station use?

Each nation has a different 5G strategy. For 5G, China uses 3.5GHz as the frequency. Then, a 5G base station resembles a 4G system, but it's on a much larger scale. For sub-6GHz in 5G, let's say you have a macro base station. The power levels at the antenna range from 40 watts, 80 watts or 100 watts.

Could a 5G power outage be a disaster?

Telecom infrastructures are connecting our society, but power outages could be a disaster because even the smallest fluctuation in power could result in communication blackouts or network failures. Investing in a telecom battery backup system is always one of the priorities for telecommunication operators in the 5G era.

Why is Infineon developing a 500-W 5G PSU?

thermal resistance between the device and heatsink. This and other techniques, such as greater use of planar magnetics, have enabled Infineon to develop a prototype 500-W 5G PSU that delivers high efficiency in a dense, low-profi.

Why do we use a dual-boost topology in a 5G PSU?

o implement each approach and the thermal behavior. For example, in our 500-W 5G PSU design, we have chosen a dual-boost topology using silicon MOSFETs, partly because this approach spreads the thermal losses due to

switching across two devices, reducing the amount each heats up and creating two lower-temperature hotspots. Below in Fig. 4 is
