Developments will address grid reliability, long duration energy storage, and storage manufacturing The Department of Energy's (DOE) Office of Electricity (OE) is pioneering innovations to advance a 21st century electric grid. A key component of that is the development, deployment, and utilization.

WASHINGTON, D.C., April 8, 2025 — Today the American Clean Power Association (ACP) released an Energy Storage Market Reform Roadmap and analysis produced by the Brattle Group, outlining several key reforms that regional grid operators can enact to leverage the unique capabilities of energy storage.

Building on this progress and to keep the momentum, in 2023, EU countries set the binding target of achieving a share of at least 42.5% renewables in the energy mix by 2030. Harnessing the energy of abundant renewable sources like the wind, the sun and our rivers offers a sustainable and crucial.

A new, floating pumped hydropower system aims to cut the cost of utility-scale energy storage for wind and solar (courtesy of Sizable Energy). Support CleanTechnica's work through a Substack subscription or on Stripe. This year's sharp U-turn in federal energy policy is a head-scratcher for any.

Breakthroughs in battery technology are transforming the global energy landscape, fueling the transition to clean energy and reshaping industries from transportation to utilities. With demand for energy storage soaring, what's next for batteries—and how can businesses, policymakers, and

investors.
