

SolarTech Power Solutions

Pure sine wave intelligent control inverter

Overview

What is a pure sine wave inverter?

A pure sine wave inverter turns the direct current (DC) from your solar panels or batteries into the alternating current (AC) that powers your home. Unlike modified sine wave inverters, which produce a rough approximation of AC power, pure sine wave inverters generate a smooth, clean output that closely resembles the power you get from the grid.

What is a true sine inverter?

True sine inverter DC 24V to AC 110V/220V/230V/240V, 50/60Hz frequency can be selected. 24 volt pure sine wave 200W inverter with multiple protections, such as overload protection, over temperature protection, over voltage protection, and short circuit protection. The working temperature of this pure sine wave power inverter between -20 °C to 70 °C.

Why do you need a sine wave inverter?

Most appliances in your home use AC power, so you need it to convert the DC power that solar panels produce to AC power. It also brings up the voltage to the grid level. A pure sine wave inverter also saves you money, as it's much more efficient than the older, jagged wave inverters.

How much does a pure sine inverter cost?

If you need a pure sine unit for your car, there are plenty of affordable options in this range. \$100-\$500 range: This is what you're likely to pay for most pure sine wave inverters on the market. These usually generate between 1,000 and 2,000 watts, so you can use one to power appliances in your off-grid cabin, RV, or boat.

What is a 500 watt pure sine wave inverter?

500 watt pure sine wave inverter price is affordable and quality is excellent. 48V DC pure sine inverter to 240V AC, output voltage 110V/100V/220V/230V

are optional, 50Hz and 60Hz can be selected, light weight, stable and compact design, with output short circuit protection, overload protection, input low voltage protection.

How much does a sine wave inverter cost?

\$100-\$500 range: This is what you're likely to pay for most pure sine wave inverters on the market. These usually generate between 1,000 and 2,000 watts, so you can use one to power appliances in your off-grid cabin, RV, or boat. \$500 and above: This kind of money will get you a heavy-duty inverter with a power capacity from 3,000 to 12,000 watts.
