Qatar Flywheel Energy Storage

Overview

Flywheel energy storage (FES) works by spinning a rotor () and maintaining the energy in the system as . When energy is extracted from the system, the flywheel's rotational speed is reduced as a consequence of the principle of ; adding energy to the system correspondingly results in an increase in the speed of the flywheel. W.

Qnetic's revolutionary flywheel energy storage system (FESS) has the biggest energy capacity in the world. It is a technological breakthrough, resulting in a very low-cost storage solution, enabling mass-deployment and acceleration towards renewables.
