Russian energy storage liquid cooling container factory is running

Overview

What is a composite cooling system for energy storage containers?

Fig. 1 (a) shows the schematic diagram of the proposed composite cooling system for energy storage containers. The liquid cooling system conveys the low temperature coolant to the cold plate of the battery through the water pump to absorb the heat of the energy storage battery during the charging/discharging process.

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.

How much power does a containerized energy storage system use?

In Shanghai, the ACCOP of conventional air conditioning is 3.7 and the average hourly power consumption in charge/discharge mode is 16.2 kW, while the ACCOP of the proposed containerized energy storage temperature control system is 4.1 and the average hourly power consumption in charge/discharge mode is 14.6 kW.

What is a container energy storage system?

Containerized energy storage systems play an important role in the transmission, distribution and utilization of energy such as thermal, wind and solar power [3, 4]. Lithium batteries are widely used in container energy storage systems because of their high energy density, long service life and large output power [5, 6].

What is a liquid cooling unit?

The product installs a liquid-cooling unit for thermal management of energy

storage battery system. It effectively dissipates excess heat in high-temperature environments while in low temperatures, it preheats the equipment. Such measures ensure that the equipment within the cabin maintains its lifespan.

What is the COP of a container energy storage temperature control system?

It is found that the COP of the proposed temperature control system reaches 3.3. With the decrease of outdoor temperature, the COP of the proposed container energy storage temperature control system gradually increases, and the COP difference with conventional air conditioning gradually increases.
