

SolarTech Power Solutions

Slovenia PV DC combiner box

Overview

What is a DC combiner box?

Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I,V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems.

How are PV DC combiner boxes tested?

PV DC combiner boxes are tested according to IEC-61439-2 and are constructed on the basis of the test results as well as assembled for the specific application. This ensures that each of the requirements of the target application is fully met.

What is a combiner box?

In off-grid applications, combiner boxes are crucial for consolidating multiple solar panel outputs into a single DC output that feeds into battery storage systems or DC loads. For example, in remote areas where grid access is limited, an off-grid solar system can utilize a combiner box to manage inputs from various panels efficiently.

What is a DC combination box?

Standard DC Combiner Box Function: Combines the DC outputs from multiple solar strings before they reach the inverter. Features: Typically includes overcurrent protection devices such as fuses or circuit breakers for each string to ensure safety and prevent damage in case of faults.

What makes a good combiner box?

The choice of material affects durability, weight, and resistance to environmental factors. NEMA Ratings: Most combiner boxes are designed for outdoor use and have NEMA ratings (such as NEMA 3R, 4, or 4X) that indicate their ability to withstand moisture and dust. A higher NEMA rating provides

better protection against harsh weather conditions.
