

## SolarTech Power Solutions

# Solar On-site Energy Outdoor Identification System

## Overview

---

What is a Sun-in-one solar sign kit?

Sun-In-One Solar Sign Kits are not just for sign lighting. In fact, they can be used for a wide variety of applications: flood lighting, monument/flag lighting, parking lot lighting, security lighting, billboard lighting, and to power LED and channel letter signs.

What are solar sign lighting kits?

Solar sign lighting kits are a great way to illuminate your signs, banners, billboards, and other outdoor advertising materials. Suninone sign lighting products use the power of the sun to provide bright, energy-efficient, and eco-friendly lighting for your signs.

Is solar sign lighting a sustainable solution?

In conclusion, solar sign lighting offers a versatile and sustainable solution for illuminating signs, enhancing their visibility, and ensuring they effectively communicate their intended messages.

What types of signs can be powered with a solar lighting kit?

These include internally lite, channel lettering lite, or externally lite signs that can all be powered with a solar lighting kit. When you look at installation, traditional sign lighting systems can require long runs of electrical wire (from a power source to the light fixture), which often need to be buried (trenched) and re-landscaped over.

What is an off-grid solar lighting system?

Off-grid solar lighting systems are perfect for such scenarios, providing a dedicated power source for the sign. These systems use low-voltage DC power and inexpensive low-power lines, eliminating additional electric bills and reducing reliance on non-renewable energy sources.

Where should solar panels be placed on a sign?

Sometimes, the solar panels can be placed right next to the sign; however, there are a few cases where the sign is located in a space with lots of landscaping, trees, and even buildings. These systems must be located further away to ensure the panels are not shaded during the daytime.
