

SolarTech Power Solutions

Solar PV water pump inverter with battery

Utility-Scale ESS solutions

Overview

What is a solar water pump inverter?

SI22 solar water pump inverter is cost-effective and economical, small and exquisite, palm-sized, greatly saving installation space and transportation costs. Solar pumping system converts solar energy directly into electric energy, and then drives motors to drive water pumps to pump water from deep wells, rivers, lakes and other water sources.

How does a solar pumping system work?

Solar pumping system converts solar energy directly into electric energy, and then drives motors to drive water pumps to pump water from deep wells, rivers, lakes and other water sources. The system consists of solar panels, solar pump inverter and water pump.

What is solar PV water pumping system?

Introduction The solar PV water pumping system is best solution for remote areas where grid connectivity is not possible. The design of the system using simulation software helps to get the best result from available resources. Software results help to rectify problems of the system before on field installation.

What is the new solar water pump inverter Sp100 series?

After years of deep cultivation and exploration in the solar water pump industry, INVT has carefully developed a new solar water pump inverter: SP100 series. SP100 has comprehensively upgraded the usability, functionality, and performance of its existing solar water pump products.

How to choose a solar pump inverter?

Understand the rated power of the water pump. Normally, the rated power of the solar pump inverter should be slightly more than or equal to the rated power of the water pump to ensure that the pump can be operated normally.

For instance, if the water pump's rated power is 2kW, the selected inverter should have a rated power of 2kW or higher.

How does a solar pump inverter work?

The solar pump inverter converts the DC output by the solar array into AC and drives the water pump; in addition, it adjusts the output voltage and frequency according to the sunshine intensity in real time to realize maximum power point tracking and to maximize the use of solar energy.
