**Solar panels are currently
profitable**

Overview

The average ROI of solar panels in the U.S. is about 10%. That means you'll make an average profit of \$10 for every \$100 you spend on your solar power system. Over time, a 6-kilowatt solar power system saves the typical household about \$1,500 per year or \$125 per month.

The average ROI of solar panels in the U.S. is about 10%. That means you'll make an average profit of \$10 for every \$100 you spend on your solar power system. Over time, a 6-kilowatt solar power system saves the typical household about \$1,500 per year or \$125 per month.

Solar Investment Sweet Spot: Homeowners with monthly electricity bills above \$75 and electricity rates exceeding \$0.16/kWh see the strongest returns, with payback periods as short as 4-6 years in high-rate states like California and Hawaii. **Federal Tax Credit Urgency:** The 30% federal tax credit.

Many homeowners see an ROI on solar panels, but it ultimately depends on factors like panel location and size, fees and incentives, labor and maintenance needs. This guide will break down how to calculate solar savings and the variables that may impact your costs. The average ROI of solar panels in.

Simply put, your ROI is the amount of money you can expect to save over the lifetime of your solar panels compared with the initial cost of purchasing and installing the equipment. In this article, we'll explore the concept of solar panel ROI in more detail, including the factors that can impact it.
