# Solar panels supercharging

## Overview

---

Does Tesla have a Supercharger station?

But a charging station that's beaming with solar panels, Megapacks and more stalls than any other Tesla Supercharger site on Earth is still a remarkable achievement. The company just opened Project Oasis, a massive Supercharger station, in Lost Hills, California. It features 84 stalls that are currently operational and also fully solar-powered.

Could Tesla Supercharger set a new benchmark for sustainable EV charging?

This incredible 84-stall Tesla Supercharger location may have set a new benchmark for fully sustainable EV charging. Tesla opened its largest Supercharger in the world ahead of the July 4 weekend. It's located right off the Interstate 5 which connects San Francisco and Los Angeles—a major EV corridor.

How many Tesla Supercharger stalls are there?

Tesla has now unveiled the project and turned on most of the Supercharger stalls: The project consists of 168 chargers, with half of them currently operational, making it one of the largest Supercharger stations in the world. However, that's not even the most notable aspect of it.

Will Tesla add solar & batteries?

While Tesla did add solar and batteries to a few stations, the vast majority of them don't have their own power system or have only minimal solar canopies. Back in 2016, I asked Musk about this, and he said that it would now happen as Tesla had the "pieces now in place" with Supercharger V3, Powerpack V2, and SolarCity:.

How many solar panels does Tesla have?

The station is equipped with 11 MW of ground-mounted solar panels and canopies, spanning 30 acres of land, and 10 Tesla Megapacks with a total

energy storage capacity of 39 MWh. It can be operated off-grid, which is the case right now, according to Tesla. 30 acres, interesting.

Are solar and battery deployment accelerating?

Yet, solar and battery deployment haven't accelerated much in the decade since Musk made that comment, but it is finally happening. Last year, Tesla announced a new project called 'Oasis', which consists of a new model Supercharger station with a solar farm and battery storage enabling off-grid operations in Lost Hills, California.
