Solar power generation communication base station

Overview

What is a solar-powered base station?

A solar-powered base station as shown in Fig. 5.14 consists of a PV powering unit, a base station and a cooling unit. The base station uses radio signals to connect devices to network as a part of traditional cellular telephone network and solar powering unit is used to power it.

What are some examples of solar-powered base stations?

Below are some examples of the use of solar-powered base stations for disaster-struck and remote areas. In Vermont, United States, a Canadian border town of Norton maintained communications with the outside world by using a solar panel and battery system on a cell tower during flooding from Tropical Storm Irene in 2011.

Are solar-powered cellular base stations the future of telecommunications?

In recent years, the telecommunication sector has shown an increased interest in the adoption of solar-powered cellular base stations due to financial benefits, accessibility to remote areas, and reduction in green gases in the environment.

What is a green base station?

A green base station aims to combine renewable energy with emerging information and communication technology. It usually uses renewable energy such as solar, wind, biomass, and kinetic energy. The end goal is to produce the highest efficiency in doing an environmentally friendly thing.
